WEATHER OF CONCERN

Weather of Concern

- Northern California north winds have increased and will last until Saturday afternoon. The combination of gusty winds and very dry conditions will create critical fire weather conditions, where any fire start has the potential to spread rapidly.

Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

***** “High Risk” of Significant Fire Potential from Low Relative Humidity (RH) with windy conditions areas from the Northern Sierra westward *****

***** VERY DRY air mass will be over all the Geographic Area through early next week *****

High pressure will be moving over the region today and this shift in weather pattern will gradually slow down our gusty N to NE winds. By midday today most of the windy areas will see a significant decrease in wind speeds with that trend continuing through this evening. A few higher elevation locations in the Lake/Napa and western Northern Sierra areas will continue to have some moderately strong, gusty winds overnight. "High Risk" for Significant Fire Potential has returned today for the Sacramento Valley/Foothills (NC05), Mid Coast to Mendocino (NC02), Bay Marine and Diablo-Santa Cruz Mountains (NC03A/B), and the Northern Sierra (NC07).

Rather light winds are expected region-wide Sunday and Monday, but there will be a VERY DRY air mass over the region through early next week with widespread low daytime RH (8-15%) and poor to moderate (20-50%) overnight recovery those days.

Tuesday and Wednesday the high will weaken as a low pressure trough starts to approach the region and RH begins to increase a bit, but it won't be until Thursday that we see a significant change in weather pattern as the trough arrives. Much cooler temperatures, a chance of precipitation and some gusty S to SW winds appear likely to develop across the western areas of the region Thursday and spread inland overnight. Drier conditions are expected Friday.

SOUTHERN CALIFORNIA

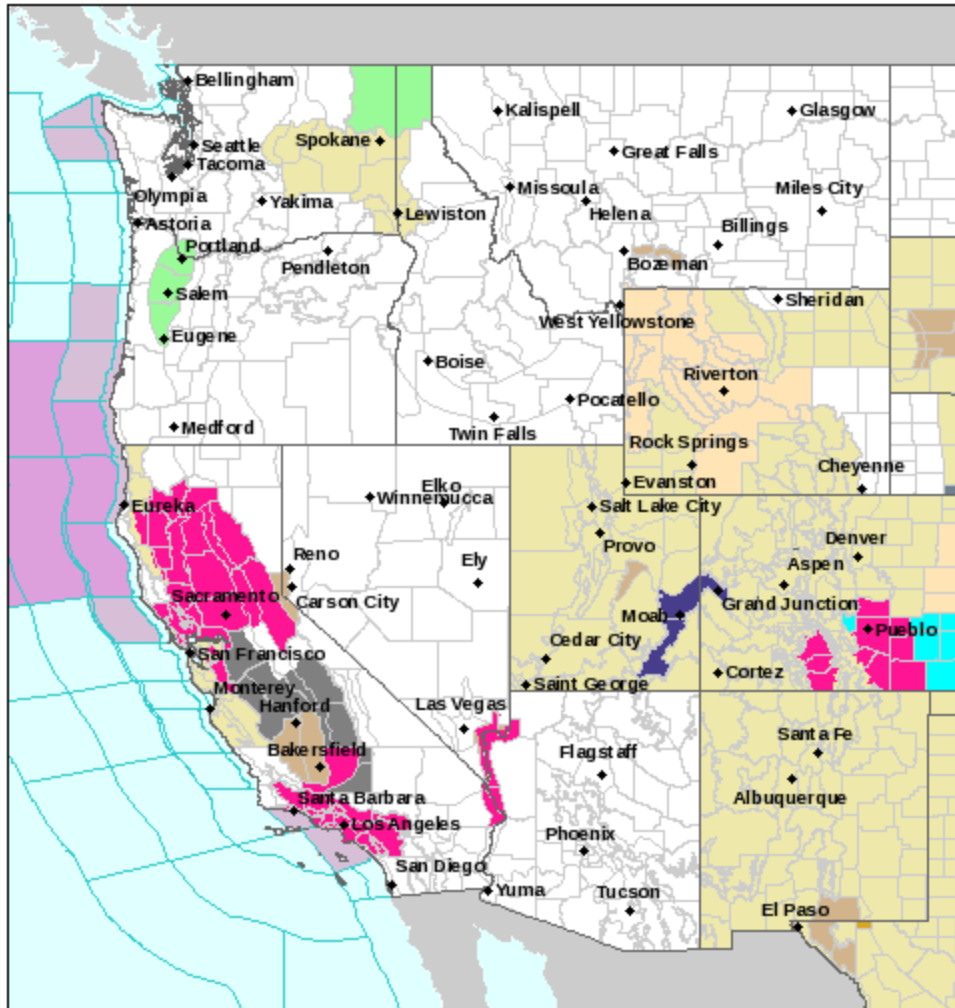

*****Strong offshore winds across Southern California through Sunday morning*****

*****Very warm and dry through Monday*****

Strong surface high pressure over the Great Basin will bring northeast winds of 15 to 30 mph with gusts to 50 mph to the mountains and below the canyons and passes of the region through Sunday morning. Widespread minimum humidity in the single digits and teens will occur through Monday and there will be poor humidity recovery tonight and Sunday night. High pressure aloft building into California from the south will bring a warming trend through Monday. Maximum temperatures will be in the 60s to low 70s across the mountains and 80s to low 90s in the valleys today. Some valley locations across Southern California will hit 100 degrees on Monday. The ridge of high pressure over California will weaken bringing cooler temperatures and higher humidity to the region Tuesday and Wednesday. Westerly winds of 15 to 25 mph with gusts to 40 mph will surface across the mountain ridges and desert passes Tuesday and Wednesday. A Pacific trough will bring below normal temperatures and possible showers to the area late next week. This trough will also bring westerly winds of 20 to 30 mph with gusts to 50 mph to the mountains and deserts late next week.
